## Abstracts

The global Space Debris Removal Service market size is expected to reach \$ 2895 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Space Debris Removal Service refers to specialized services aimed at detecting, tracking, capturing, and safely removing non-functional artificial objects in Earth's orbit, such as defunct satellites, spent rocket stages, and fragments from collisions. These services are critical to reducing collision risks, protecting operational spacecraft, and preserving the long-term sustainability of space activities. Companies and agencies providing such services employ technologies like robotic arms, nets, harpoons, lasers, and drag-enhancement devices to mitigate orbital debris, while coordinating with international space agencies for safe disposal and deorbiting.

Space Debris Removal Service Market refers to the global market for technologies and solutions dedicated to mitigating orbital debris, including satellite servicing, debris tracking, capture mechanisms, and deorbiting technologies. This market is driven by the rapid growth of satellite constellations, increasing orbital congestion, stricter regulatory frameworks, and the rising cost of satellite collisions. Key participants include aerospace companies, startups focusing on debris removal technologies, and government agencies developing orbital cleanup programs. Analysts anticipate that the market will experience significant expansion over the next decade as space activity accelerates and sustainable orbital operations become a priority.
