According to our (Global Info Research) latest study, the global Space Debris Removal Service market size was valued at US\$ 1990 million in 2025 and is forecast to a readjusted size of US\$ 2895 million by 2032 with a CAGR of 5.8% during review period.

Space Debris Removal Service refers to specialized services aimed at detecting, tracking, capturing, and safely removing non-functional artificial objects in Earth's orbit, such as defunct satellites, spent rocket stages, and fragments from collisions. These services are critical to reducing collision risks, protecting operational spacecraft, and preserving the long-term sustainability of space activities. Companies and agencies providing such services employ technologies like robotic arms, nets, harpoons, lasers, and drag-enhancement devices to mitigate orbital debris, while coordinating with international space agencies for safe disposal and deorbiting.

Space Debris Removal Service Market refers to the global market for technologies and solutions dedicated to mitigating orbital debris, including satellite servicing, debris tracking, capture mechanisms, and deorbiting technologies. This market is driven by the rapid growth of satellite constellations, increasing orbital congestion, stricter regulatory frameworks, and the rising cost of satellite collisions. Key participants include aerospace companies, startups focusing on debris removal technologies, and government agencies developing orbital cleanup programs. Analysts anticipate that the market will experience significant expansion over the next decade as space activity accelerates and sustainable orbital operations become a priority.
