The global Space Logistics and Transportation Services market size is expected to reach \$ 21057 million by 2032, rising at a market growth of 18.2% CAGR during the forecast period (2026-2032).

Space logistics and transportation services refer to the systematic capabilities and operational activities that deliver, transport, resupply, and redistribute cargo, fuel, equipment, modules, and other assets between Earth and space, as well as among different orbital locations. It primarily includes launch and orbital transfer services, cargo spacecraft, on-orbit docking and delivery, in-space resupply and refueling, and the operation of orbital transport platforms. These services support critical missions such as satellite deployment, space station resupply, spacecraft life extension, and in-space resource utilization, forming a commercial and governmental space supply chain ecosystem.
