According to our (Global Info Research) latest study, the global Space Magnetometer market size was valued at US\$ 9.4 million in 2024 and is forecast to a readjusted size of USD 13 million by 2031 with a CAGR of 4.7% during review period.

A space magnetometer is an instrument used on spacecraft to measure magnetic fields in space. It helps scientists study the magnetic environment around planets, moons, and the solar wind by detecting the strength and direction of magnetic fields. These measurements are crucial for understanding planetary magnetospheres, solar activity, and space weather. Space magnetometers are commonly used in missions exploring Earth's magnetosphere, other planets like Jupiter or Mercury, and interplanetary space. They typically use technologies like fluxgate, search-coil, or optically pumped sensors, depending on the mission's needs.
