According to our (Global Info Research) latest study, the global Space and Satellite Insurance market size was valued at US\$ 602 million in 2025 and is forecast to a readjusted size of US\$ 800 million by 2032 with a CAGR of 4.2% during review period.

Space and Satellite Insurance is a specialized property and liability insurance product designed specifically for space activities, on-orbit assets, and third-party liability. Its core function is to provide financial compensation for property damage, income interruption, and third-party damages caused by unforeseen events such as technical malfunctions, launch vehicle failures, space debris collisions, and solar storms during high-risk phases like rocket launches, satellite operations in orbit, and spacecraft reentry. Offered by professional aerospace underwriters, this insurance is priced based on sophisticated probability models and detailed technical assessments. It is an indispensable risk transfer tool in the commercial space industry chain, providing crucial financial protection for the massive investments and long-term stable operation of space projects.

As the global space economy enters a phase of rapid commercialization and normalized development, the Space and Satellite Insurance market has a promising future. The explosive growth of emerging industries such as low-Earth orbit communication satellite constellations, space tourism, and on-orbit services and manufacturing will continue to generate huge demand for customized and highly flexible insurance products. Technological innovation will drive the evolution of insurance models: real-time risk assessment through richer on-orbit telemetry data, improved pricing and claims efficiency through artificial intelligence, and the development of parametric insurance products based on 'launch success' or 'on-orbit performance.' At the same time, the

expansion of the market will attract more capital, making insurance solutions more diversified and mature, and becoming an important financial cornerstone to support the large-scale and sustainable development of the trillion-dollar space industry.
