Abstracts

The global Space Propulsion Systems market size is expected to reach \$ 22650 million by 2029, rising at a market growth of 13.2% CAGR during the forecast period (2023-2029).

Global key players of Space Propulsion Systems include Aerojet Rocketdyne, Safran, CASC, etc. The top three players hold a share over 35%. North America is the largest production area, has a share about 40%, followed by Europe, with share 33%. In terms of product type, Electric Propulsion is the largest segment, occupied for a share of 29%, and in terms of end users, National Space Agencies has a share about 34%.

Space propulsion systems are used to generate thrust in spacecraft, launch vehicles, capsules/cargos, and rovers/spacecraft landers for orbit insertion, station keeping, lifting launch vehicles into space, and attitude control, among others. These systems include chemical and non-chemical propulsion technologies such as electric, solar, nuclear, and laser propulsions.

The components used in space propulsion systems include thrusters, propellant feed systems, rocket motors, nozzles, reactors, propulsion thermal control, and power processing units (PPU). The primary function of the space propulsion system is to provide thrust, which helps in the functioning of the launch vehicle or satellite. In propulsion systems, the fluid (either solid, liquid, or electric) reacts to initiate acceleration and provide force in the system.

This report studies the global Space Propulsion Systems production, demand, key manufacturers, and key regions.
