Space-qualified Coaxial Connector is a type of high-reliability connector used in RF links of space systems such as satellites, launch vehicles, space stations and deep-space probes. The product is mainly used for microwave, millimeter-wave and high-frequency signal transmission. Its key requirements include low loss, low VSWR, stable impedance, resistance to vibration and shock, thermal cycling resistance, low outgassing, vacuum resistance and long-term reliability. It is a critical RF interconnect component in space communication, telemetry and control, navigation, radar and payload systems.

The upstream supply chain mainly includes metal structural materials such as copper alloys, stainless steel and beryllium copper, insulating dielectric materials such as PTFE, precious-metal plating materials, sealing materials and precision-machined parts. Downstream applications mainly include satellite systems, launch vehicles, space stations, deep-space exploration and other space systems. Customers usually have high requirements for product reliability, traceability, test verification and long-term supply capability.
