## Abstracts

According to our (Global Info Research) latest study, the global Space Qualified Optocouplers market size was valued at US\$ 53.6 million in 2024 and is forecast to a readjusted size of USD 99 million by 2031 with a CAGR of 10.1% during review period.

Space qualified optocouplers are devices that electrically isolate the input and output ends through optical isolation. They basically act as an interface between two independent circuits with different voltage levels. This type of isolation device usually consists of a light-emitting diode (LED) and a photoresistor (such as a photodiode). The light signal emitted by the LED controls the resistance value of the photoresistor, thereby achieving isolation and signal transmission between the input and output ends.
