Abstracts

The global Space Tourism market size is expected to reach \$ 2528 million by 2032, rising at a market growth of 14.0% CAGR during the forecast period (2026-2032).

Space tourism is space travel for recreational, leisure or business purposes. To date only orbital space tourism has taken place provided by the Russian Space Agency, although work continues developing sub-orbital space tourism vehicles by Blue Origin and Virgin Galactic. In addition, SpaceX announced in 2017 that they are planning on sending two space tourists on a lunar free return trajectory in 2018 aboard their Dragon V2 spacecraft launched by the Falcon Heavy rocket.

The space tourism market is primarily driven by the growing demand among affluent and high-net-worth individuals for unique experiences and luxury leisure activities, coupled with rapid advancements in space and commercial aerospace technologies that make space travel increasingly feasible and safe. Technological progress by private space companies in reusable rockets, flight safety, and cost management has significantly boosted market growth. Additionally, media coverage, rising public interest, and supportive government policies and infrastructure for commercial space activities further propel the expansion of the space tourism market.

Major Space tourism companies include Space Adventures, Boeing, Blue Origin, Virgin Galactic and SpaceX, with the top three accounting for about 50% of the total market. North America is the leading market with a market share of more than 40%, followed by Asia Pacific with about 30%.
