According to our (Global Info Research) latest study, the global Spacecraft Attitude Sensor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The attitude sensor is one of the core components of the spacecraft attitude control system. Its function is to process the signal of the satellite attitude angle change value sent by the attitude sensor, through a series of comparisons and processes, to generate a control signal and send it to the attitude actuator. According to the control signal sent by the attitude controller, a torque is generated to make the satellite attitude Restore to correct position. According to the method of obtaining attitude information, attitude sensors are divided into optical sensors, inertial sensors, radio frequency sensors and magnetic sensors.
