Abstracts

Spare Parts Logistics (SPL) is planned logistics in the event of component failure. Spare parts logistics ensures a smooth and timely delivery of spare parts, because the failure of relevant components in machines, production facilities or medical technology causes high downtime costs. SPL enables logistics managers to efficiently plan the supply chain (SCM) in after sales services. The precisely fitting delivery of required spare parts in the aftermarket to dealers and service technicians on site becomes cost-efficient and plannable. The right parts get to where they are needed at the right time, according to demand.

According to our (Global Info Research) latest study, the global Spare Parts Logistics market size was valued at US\$ 23420 million in 2023 and is forecast to a readjusted size of USD 27680 million by 2030 with a CAGR of 2.4% during review period.
