## Abstracts

According to our (Global Info Research) latest study, the global Spatial Omics Technology market size was valued at US\$ 343 million in 2024 and is forecast to a readjusted size of USD 680 million by 2031 with a CAGR of 10.3% during review period.

Spatial omics technology is an emerging technology in the field of life sciences. Based on microscopy techniques and molecular biology experimental methods, it simultaneously detects multiple biomarkers such as genes, proteins, metabolites, etc. in specific spatial regions of cell or tissue samples. While maintaining the spatial structure of the sample, it obtains information about gene expression, protein localization, and intercellular interactions within the same sample at once.
