According to our (Global Info Research) latest study, the global SPC Flooring Production Line market size was valued at USD 113.2 million in 2022 and is forecast to a readjusted size of USD 152 million by 2029 with a CAGR of 4.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The SPC flooring production line market is prevalent across the globe, with significant demand in several regions. The major regional segments of the SPC flooring production line market include:

1. **Asia-Pacific:** The Asia-Pacific region, particularly countries like China, India, and Japan, is the largest market for SPC flooring production lines. This is due to the increasing demand for sustainable and eco-friendly flooring options, along with the growing construction industry in the region.
2. **Europe:** Europe is also a significant market for SPC flooring production lines, driven by the rising trend of luxury vinyl tiles (LVT), which are increasingly replacing traditional flooring materials.
3. **North America:** The North American SPC flooring production line market is growing rapidly due to the increasing demand for eco-friendly and low-maintenance flooring options, coupled with the rising construction activities in the region.

SPC (Stone Plastic Composite) flooring production line is a machinery system used in the manufacturing process of SPC flooring sheets. SPC flooring is a type of rigid core

vinyl flooring that is designed to mimic the appearance of natural materials such as wood or stone. It is a popular flooring material due to its durability, waterproof properties, and low maintenance requirements.

The SPC flooring production line comprises several modules/machines that work together to produce SPC flooring sheets. The process starts with preparing PVC powder and other additives and mixing the materials using high-speed mixers. The mixed material is passed through an extruder that converts it into a thin sheet of flooring material.

The SPC flooring is then cooled and cut into the desired size using specialized cutting machines. The flooring is then subjected to heat treatment to ensure stability and durability.
