Abstracts

The global SPD Field Tester market size is expected to reach \$ 302 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

In 2025, the global production of SPD field testers reached 564,600 units, with an average selling price of US\$400 per unit. The global annual production capacity of SPD field testers was approximately 800,000 units, with a gross profit margin of approximately 23.7%. An SPD field tester is a device specifically designed for testing and evaluating the performance of surge protectors. SPD field testers are widely used in power, telecommunications, construction, and industrial facilities, especially in high-risk environments. Regular testing of surge protector performance is crucial for ensuring the safe and stable operation of electrical equipment. Using this instrument helps maintain and improve the reliability of lightning and surge protection systems, reducing equipment damage caused by surges. The upstream of the SPD field tester industry chain includes measurement and sensor devices, high-voltage and protection devices, and power supply and power systems; the midstream consists of SPD field tester manufacturers; and the downstream mainly comprises the electrical, telecommunications, and construction industries.

The current market for SPD field testers is characterized by 'steady growth and upgrading demand structure.' As industries such as power, communications, new energy, and municipal engineering conduct more frequent maintenance and compliance inspections of surge protection devices (SPDs), the demand for data-driven testing equipment that can quickly measure, generate reports, and provide traceability on-site is increasing. Simultaneously, customer requirements for testers are shifting from simply measuring continuity/status to focusing more on measurement accuracy and repeatability, compatibility with different SPD types (such as varistors/discharge

tubes/composite types), safety protection (anti-electric shock/anti-surge), anti-interference and portability, and integration with management platforms/mobile devices. In terms of competition, some equipment manufacturers rely on channels and brand recognition to establish their market position, while system integrators and testing service providers differentiate themselves through 'instrument + service.' Future market growth is expected to primarily come from the promotion of intelligent maintenance and standardized testing systems.
