The Single Pole Double Throw (SPDT) RF Switch IC is a semiconductor device used in radio frequency (RF) circuits to control the flow of signals between two different paths. It consists of one input port and two output ports, allowing the selection of either of the output paths while disconnecting the other. SPDT RF Switch ICs are commonly used in wireless communication systems, RF test equipment, and other applications that require fast and reliable switching between multiple RF signals. These ICs offer low insertion loss, high isolation, and excellent linearity, enabling seamless switching without significant signal degradation. Their compact size, low power consumption, and compatibility with high-frequency signals make them essential components in modern RF circuit designs.
