Special plasticizers refer to a class of plasticizers designed for specific performance requirements or application scenarios. Their core characteristics are special performance advantages that traditional plasticizers (such as general phthalates) do not have, such as environmental protection, high temperature resistance, low migration, etc. Most of them are trimellitate and adipic acid.

The special plasticizer industry has shown a steady growth trend in recent years, especially in the context of environmental protection policy drive and technological innovation, the market demand for high-performance, low-toxicity environmentally friendly products has increased significantly. As the world's largest plasticizer producer and consumer, China is expected to further expand its market size in the future with the strengthening of environmental protection regulations and the upgrading of downstream industry demand.

Specifically, the penetration rate of special plasticizers in high-end applications such as medical, automotive and construction continues to increase. In addition, as consumers pay more attention to safety and health, the demand for environmentally friendly special plasticizers in food packaging and medical devices is also rising.
