Negative pressure drainage sponge is a medical dressing, also known as negative pressure sponge. It is a porous material with high adsorption performance that can be used to absorb and discharge wound secretions. Negative pressure drainage specialized sponges are usually made of polyurethane, silicone or other materials and have the following characteristics: porosity: Negative pressure drainage specialized sponges have a porous structure and can absorb a large amount of wound secretions. Strong adsorption: The specialized sponge for negative pressure drainage has strong adsorption, which can effectively adsorb bacteria and toxins in wound secretions. Soft: The specialized sponge for negative pressure drainage is very soft and can adapt to wounds of different shapes. Tailability: The specialized sponge for negative pressure drainage can be tailored according to the size and shape of the wound to meet different treatment needs. A specialized sponge for negative pressure drainage is usually used in conjunction with a negative pressure drainage system. Through negative pressure, it can promote wound healing and reduce the occurrence of infections and complications. The specialized sponge for negative pressure drainage has been widely used in fields such as surgery, wound treatment, and chronic wound treatment.
