Abstracts

The global Special Urethane Wiper Blades market size is expected to reach \$ 412 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

In 2025, global Special Urethane Wiper Blades production reached approximately 9,800 K meters, with an average global market price of around 28.5 US\$/m.

Special Urethane Wiper Blades are customized or high-performance wiping, scraping, sealing, and cleaning components made from polyurethane elastomers. They are designed to remove oil, coolant, chips, dust, slurry, ink, coating residue, water, or bulk material from moving surfaces such as machine-tool guideways, conveyor belts, printing rollers, coating lines, floor-cleaning equipment, and industrial machinery. Compared with ordinary rubber blades, urethane wiper blades offer higher abrasion resistance, better tear strength, stronger chemical and oil resistance, wider hardness selection, and longer service life, making them suitable for demanding industrial environments where stable wiping performance and reduced equipment downtime are required.

Demand for Special Urethane Wiper Blades is driven by industrial automation, machine-tool maintenance, conveyor system cleaning, packaging and printing equipment upgrades, and the replacement of conventional rubber parts with longer-life polyurethane components. As factories focus on equipment reliability, cleanliness, and lower maintenance costs, urethane blades are increasingly used as consumable wear parts in CNC machines, material handling systems, screen printing, coating, mining, food processing, and industrial cleaning equipment. Business opportunities are strongest in customized blade profiles, high-hardness wear-resistant formulations, oil- and chemical-resistant grades, metal-backed wiper assemblies, and OEM replacement

parts, while suppliers with mold design, polyurethane casting, precision machining, and small-batch customization capabilities are better positioned to serve diversified industrial applications.
