Abstracts

Specialized threat analysis and protection involves detecting and preventing malware-based attacks and cyber-attacks. It includes identity and access management, encryption, intrusion detection, and other advanced security software. They are based on signature-less technology such as sandboxing, emulation, big data analytics, and containerization. These products allow reverse engineering and forensic analysis of detected threats. With the emergence of specialized threats such as financial and intellectual property theft; specialized threat analysis and protection technology is being adopted by enterprises to detect, analyze, and prevent these threats. Organizations in the BFSI and government sectors have also begun to realize that they need protection against targeted attacks, and have begun to deploy specialized threat analysis and protection solutions.
