According to our (Global Info Research) latest study, the global Spectrophotometer market size was valued at USD 2473.6 million in 2023 and is forecast to a readjusted size of USD 3015.6 million by 2030 with a CAGR of 2.9% during review period.

A spectrophotometer is an instrument that used for the measurement of transmittance or reflectance of solutions, transparent or opaque solids, such as polished glass, or gases. However they can also be designed to measure the diffusivity on any of the listed light ranges that usually cover around 200 nm - 2500 nm using different controls and calibrations.

A spectrophotometer, in general, consists of two devices; a spectrometer and a photometer. A spectrometer is a device that produces, typically disperses and measures light. A photometer indicates the photoelectric detector that measures the intensity of light.

First a collimator (lens) transmits a straight beam of light (photons) that passes through a monochromator (prism) to split it into several component wavelengths (spectrum). Then a wavelength selector (slit) transmits only the desired wavelengths. After the desired range of wavelength of light passes through the solution of a sample in cuvette, the photometer detects the amount of photons that is absorbed and then sends a signal to a galvanometer or a digital display.

The major players in global Spectrophotometer market include Agilent, Thermo Fisher, Hitachi, etc. The top 3 players occupy about 30% shares of the global market. China is the main market, and occupies about 35% shares of the global market. UV-Visible
