The global Speech Generating Devices market size is expected to reach \$ 582 million by 2032, rising at a market growth of 8.2% CAGR during the forecast period (2026-2032).

Speech Generating Devices also known as voice output communication aids, are electronic augmentative and alternative communication (AAC) systems used to supplement or replace speech or writing for individuals with severe speech impairments, enabling them to verbally communicate. SGDs are important for people who have limited means of interacting verbally, as they allow individuals to become active participants in communication interactions. They are particularly helpful for patients suffering from Amyotrophic Lateral Sclerosis (ALS) but recently have been used for children with predicted speech deficiencies.
