Abstracts

The global Speed Refrigeration Compressor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In the speed-type refrigeration compressor, the increase of gas pressure is converted from the speed of the gas, that is, to make the inhaled air flow obtain a certain high speed, and then slow it down, so that its kinetic energy is converted into the pressure energy of the gas, and the pressure rises Discharge after high. Therefore, the compression process in the speed type compressor can be carried out continuously.
