The speedometer needle is an important component on the dashboard of a car used to display the current driving speed of the vehicle. It usually consists of pointers, dials, and driving mechanisms, which can reflect the real-time driving speed of the vehicle and provide important driving information for the driver. The working principle of the speedometer needle is usually closely connected to the speed sensor. The speed sensor measures the vehicle's speed by sensing the rotational speed of the wheels and transmits this information to the speedometer. After receiving the signal, the speedometer will drive the pointer to rotate on the dial, indicating the current driving speed.
