A spent wash fired boiler is a specialized type of boiler that is designed to utilize spent wash, a by-product of the distillation process, as its primary fuel source. Spent wash is a liquid waste material that contains organic matter and has a relatively low calorific value. This type of boiler offers an efficient and environmentally - friendly solution for distilleries and other industries dealing with similar waste streams. By burning spent wash, it not only helps in the proper disposal of the waste, reducing the environmental impact, but also generates valuable steam. The steam produced can be used for various purposes within the facility, such as meeting the process steam requirements for the distillation process itself or for power generation by driving turbines. This enables the recovery of energy from what would otherwise be a waste product, improving the overall energy efficiency and sustainability of the operation.
