Abstracts

The global SPF and OCF Foam market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

SPF is a type of plastic that is sprayed on as a liquid and then expands to form solid foam. It is used in construction and insulation applications. OCF is similar to SPF, but it is sold in aerosol cans and used for smaller projects. SPF and OCF are made from two different types of polyurethane: rigid polyurethane foam (RPF) or flexible polyurethane foam (FPF). RPF is used in construction applications where high strength and stiffness are required, such as in load-bearing walls or roofs.

This report studies the global SPF and OCF Foam production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for SPF and OCF Foam, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
