Abstracts

Spherical boron nitride is a polycrystalline sphere composed of boron nitride micron-sized monoliths. Compared with flake, tubular and layered boron nitride, spherical boron nitride not only maintains the original excellent properties of boron nitride, such as less ionic impurities, low expansion coefficient, high dielectric strength, but also has particle fluidity. Good quality, high specific surface area. It can improve the anisotropic performance of thermal conductivity, and the spherical boron nitride particles have a smaller surface area, so that the addition amount of boron nitride in the polymer can be higher, thereby obtaining higher thermal conductivity performance.
