According to our (Global Info Research) latest study, the global Spin-On Carbon SOC Material market size was valued at USD 640 million in 2022 and is forecast to a readjusted size of USD 1148.2 million by 2029 with a CAGR of 8.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Spin-on carbon (SOC) hardmasks are an increasingly key component of the micro-chip fabrication process. They are frequently used to improve the resists' selectivity to silicon during plasma etching. Spin-on hardmask materials are widely adopted as sacrificial layers to enable pattern transfer at high resolution and act as etch stopping layer or memory layer in multiple patterning technologies. Compared with typical CVD processes for thin film formation, spin-on materials offer superior gap-fill and planarization performance.
