According to our (Global Info Research) latest study, the global Spinal Surgical Robots market size was valued at USD 186.1 million in 2023 and is forecast to a readjusted size of USD 519.4 million by 2030 with a CAGR of 15.8% during review period.

Spinal surgery has evolved dramatically over the years as advances in technology have made it possible to improve surgical techniques. Spinal surgery involves the modification of the affected area of the back bones and nerves. The implantation of one or more screws or components is a very delicate surgery. The robot can achieve better precision than can a skilled surgeon. Robotic procedures offer significant cost savings in terms of pre- and post-operation care costs and length of stay at hospitals. Technological advances and breakthroughs leverage new materials and new sensor configurations. Sophisticated software is further evolving product implementation: Clinically efficient solutions, Clinically less complex surgery, Shorter length of stay, Minimally invasive surgery, Financially lower cost and Operationally more simple.

Global Spinal Surgical Robots main players are Mazor Robotics, Medtech S.A, TINA VI Medical Technologies, etc. Global top three manufacturers hold a share over 90%. North America is the largest market, with a share nearly 70%.
