Abstracts

Spindle Increasers are designed and developed to elevate the standard machine spindle RPM's by typically a factor of 3 to 5 depending on the gear ratio. All this while ensuring maximum reliability and precision in CNC drilling and light milling operations, particularly in finishing operations. An example of this is by maintaining a 3000 RPM on your machine you can achieve 9,000 – 15,000 RPM using a spindle speeder. A spindle increaser can be easily loaded into the spindle or the tool magazine manually and performing an ATC (automatic tool change) can be obtained smoothly. Manufacturers use these devices to run small tools and high rpms on machines that are otherwise incapable of either.

According to our (Global Info Research) latest study, the global Spindle Increaser market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
