The spindle unit is the unit that directly drives the tool or workpiece to rotate during CNC machine tool processing, and performs cutting, grinding and other processing procedures. It is an assembly that includes the spindle and other accessories such as bearings, tool holding systems, etc. According to the driving mode, the main shaft unit can be divided into: gear type, belt type, direct connection type and built-in type. The spindle motor and the tool run at high speed to improve the processing efficiency. The motor rotor directly serves as the main shaft of the machine tool. The shell of the spindle unit is the base of the motor, and other components are used to fulfill the integration of the motor and the spindle of the machine tool.
