## Abstracts

The global Spine Surgery Navigation and Positioning Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The navigation and positioning equipment for spinal surgery has the functions of preoperative planning, robotic arm positioning and real-time navigation during surgery, which further improves the surgical safety. The spinal surgery navigation and positioning device collects the target spinal segment data of patients, plans the nailing route, and guides doctors to operate, thus achieving accurate, minimally invasive and rapid nailing, reducing radiation exposure, shortening the operation time, protecting the normal spinal tissue to a great extent, providing patients with better treatment plans, and meeting the needs of patients for efficient and safe spinal surgery. In the future, the prospects are good.

Navigation and positioning equipment for spinal surgery is a tool used to assist doctors in spinal surgery. It can help doctors position the vertebra more accurately during surgery, thus improving the success and safety of the operation.
