The spiral tubular infusion extension tube is a medical device used to extend the length of the pipeline during the infusion process. It is usually made of soft material, has a spiral or curved shape, and has a certain degree of elasticity and stretchability. This extension tube has a certain degree of bendability, which can reduce twisting and pulling force on the infusion pipeline to a certain extent, and provide better comfort and adaptability. At the same time, it can also reduce the load on the infusion set or the infusion bag, making the infusion process more stable.
