According to our (Global Info Research) latest study, the global Spiral Microbubble Exhaust Valves market size was valued at US\$ 912 million in 2024 and is forecast to a readjusted size of USD 1304 million by 2031 with a CAGR of 5.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Spiral Microbubble Exhaust Valve is a valve device designed for efficient removal of tiny bubbles in liquid systems. It uses a unique spiral mesh structure to optimize the bubble separation process. The internal spiral mesh structure changes the flow path of the fluid and reduces the flow rate, giving the bubbles more time to separate from the liquid. It is particularly suitable for fluid environments with high bubble concentrations or very small bubbles. The valve can provide efficient bubble removal while maintaining low fluid pressure loss. It is widely used in boiler steam systems, cooling systems and other occasions that require efficient exhaust, effectively improving the operating efficiency and stability of the system.
