A spiral oven is a device that utilizes hot air circulation and a spiral conveyor to continuously bake items. It mainly consists of a spiral conveyor, heating elements, a hot air circulation system, and a control system. It generates heat through the heating elements, raising the temperature of the air inside the oven. The hot air flows evenly over the items being baked under the action of the spiral conveyor, achieving an efficient and uniform baking effect. Compared to layer ovens, spiral ovens are larger in size and capacity. By adjusting the spacing of the spiral conveyor belt through the control system, it can accommodate baking products of different volumes.
