The global Spirometer market size is expected to reach \$ 1379 million by 2032, rising at a market growth of 7.3% CAGR during the forecast period (2026-2032).

A spirometer is a device that gauges lung function by measuring the amount of air a patient is able to blow out of his lungs. A primary care physician or allergist may perform spirometry on a patient if he presents symptoms such as trouble breathing, wheezing, chest tightness or shortness of breath. Spirometers can measure 'forced expiratory volume', the amount of air that can be blown out of the lungs in a single second. Spirometers also measure 'forced vital capacity', the total amount of air a patient can expel from his lungs. These two measurements are then used to determine the total amount of air a patient can blow out in one breath.

Global Spirometer key players include BD (CareFusion), Schillerm, Hillrom, CHEST. MI., MIR, etc. Global top five manufacturers hold a share about 40%. North America is the largest market, with a share about 50%, followed by Europe and Japan, both have a share about 30% percent. In terms of product, Desktop is the largest segment, with a share over 57%. And in terms of Application, the largest level is Hospitals and clinics, followed by Home, etc.
