The global SPL Meter market size is expected to reach \$ 1738.7 million by 2029, rising at a market growth of 5.3% CAGR during the forecast period (2023-2029).

SPL meter, also known as a sound level meter or decibel meter, is a device used to measure the sound pressure level (SPL) in an environment. It is commonly used in various industries, including construction, entertainment, and occupational health and safety, to assess and monitor noise levels. SPL meters typically consist of a microphone to capture sound, an amplifier to amplify the signal, and a display to show the measured SPL in decibels (dB). They are used to ensure compliance with noise regulations, assess potential hearing damage risks, and evaluate the effectiveness of noise control measures.
