The global Split Barrel Extruder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A split barrel extruder is a type of extruder that consists of two separate barrels, which are designed to split apart at a certain point. The extruder screw is also split at this point, allowing for a gap that can be used to insert additives or other materials into the melt stream. The split barrel extruder is commonly used in the plastics industry to add colorants, fillers, and other additives to the plastic melt stream during processing. This design helps to improve mixing and dispersion of the additives, resulting in a more uniformly colored and consistent product. Additionally, the split barrel design also simplifies cleaning and maintenance of the extruder, as the barrels can be easily separated and cleaned.
