## Abstracts

The global Split CIP System market size is expected to reach \$ 193.5 million by 2029, rising at a market growth of 4.4% CAGR during the forecast period (2023-2029).

The CIP cleaning system can be used for brushing, cleaning and sterilization without dismantling the mechanical devices and pipelines. It is an optimized cleaning management technology that can reasonably handle the relationship between washing, cleaning, sterilization, economy, and energy conservation during the cleaning process. The CIP device is an advanced automatic cleaning-in-place system used to clean filling machines, pasteurizers, sanitary pipes, tanks, sterile tanks, plate heat exchangers and other process equipment.

The CIP cleaning system can ensure a certain cleaning effect and improve product safety; save operating time and improve efficiency; save labor and ensure operational safety; save water, steam and other energy, and reduce the amount of detergent; production equipment can be large-scale and automated High level; extend the service life of production equipment. The chemical energy of the mechanism of CIP cleaning is mainly generated by the chemical reagents added to it. It is the most important factor that determines the cleaning effect.

The CIP cleaning device process flow chart is a very important part of the cleaning process, which directly affects the cleaning effect and efficiency. Usually, the process flow of CIP cleaning equipment includes the following main links: pre-rinsing, main washing, intermediate washing, intermediate pickling, post-water washing, intermediate alkali washing, post-treatment, etc. Among them, pre-rinsing is mainly a preliminary rinse of the cleaning devices to remove impurities and dirt on the surface; main washing is a detailed cleaning of the cleaning devices, mainly coating and spraying through

quantitative flow; intermediate washing is Intermediate treatment is performed on the dirt generated after the main washing; intermediate pickling is a soaking treatment of the components to remove dirt that is difficult to clean; post-washing is a treatment after cleaning the components; intermediate alkali cleaning is for the components produced by the intermediate pickling. Acidic substances are used for treatment; post-processing is to further process the cleaned devices to achieve better cleaning results.

The CIP cleaning system has many technical advantages over traditional cleaning methods. First of all, the CIP cleaning system can automatically execute the entire cleaning process, so it is efficient and stable; secondly, the CIP cleaning device can reduce manual operations, produce less cross-contamination, and improve the cleaning effect; thirdly, the CIP cleaning device can save manpower, material resources, financial resources and other costs to improve the economic benefits of the enterprise. In addition, because the CIP cleaning device can perform adaptive control and operating parameter adjustment, it can perform personalized and differentiated control for different cleaning requirements and different cleaning materials to minimize contamination and thereby improve the cleaning effect.

Faced with fierce market competition, manufacturers should continue to develop and improve CIP cleaning systems to improve system performance and efficiency to meet changing market demands. At the same time, pay attention to the development trends of new technologies, such as the Internet of Things, artificial intelligence, etc., and apply these technologies to the CIP cleaning system to improve the intelligence and automation level of the system. In-depth understanding of customer needs and feedback, and product design and improvement based on customers' actual needs. At the same time, we provide personalized solutions to meet the needs of different customers and industries. Provide comprehensive after-sales services, including installation and commissioning, usage training, maintenance, etc. Strengthen communication and contact with customers, solve customer problems and feedback in a timely manner, and improve customer satisfaction and loyalty. Pay attention to environmental protection regulations and market demand for environmental protection, and use environmentally friendly materials and processes to reduce the impact on the environment. At the same time, we will strengthen the treatment and emission control of waste water and waste gas to improve the company's environmental responsibility and image.
