Abstracts

The global Split Current Transformer market size is expected to reach \$ 365 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

In 2025, the global production of open-type current transformers reached 38.0253 million units, with an average selling price of US\$7.5 per unit. The global annual production capacity of open-type current transformers is approximately 50 million units, with a gross profit margin of approximately 25.1%. An open-type current transformer is a specially designed current transformer, its core feature being a clearly defined opening or gap rather than a closed magnetic core structure. This design facilitates current measurement by passing wires or conductors through the opening in the magnetic core during installation or maintenance. The upstream of the open-type current transformer industry chain includes magnetic core materials and soft magnetic materials, Hall elements, temperature sensors, etc.; the midstream consists of open-type current transformer manufacturers; and the downstream mainly comprises industries such as energy, electronics, and shipbuilding.

The open-type current transformer market is in a phase of steady growth, driven by the intelligent upgrading of power systems, the advancement of distribution network automation, and the increasing demand for high-precision, fast-response current monitoring. With increasing demands for flexibility, ease of installation, and adaptability to space-constrained scenarios in open-type structures, market demand is rising for products with miniaturization, low temperature drift, low error, and good EMC performance. Meanwhile, industry standardization, integration with digital monitoring systems, and the stability of the global supply chain will be crucial factors influencing market size and price.

This report studies the global Split Current Transformer production, demand, key manufacturers, and key regions.
