According to our (Global Info Research) latest study, the global Split-design Delivery Robots market size was valued at US\$ 737 million in 2025 and is forecast to a readjusted size of US\$ 1234 million by 2032 with a CAGR of 7.6% during review period.

Split-design delivery robots are modular autonomous systems integrating a mobile chassis with detachable smart cargo cabinets, utilizing 5G, IoT, and AI scheduling algorithms to achieve flexible adaptation across diverse operational scenarios. Their core value lies in the separation of the power and navigation unit from the storage module, allowing a single mobile base to serve multiple cabinets with different functions, thereby maximizing equipment utilization rates and ensuring efficient, contactless delivery through autonomous docking, navigation, and obstacle avoidance capabilities. These robots autonomously execute complex logistics tasks such as vertical transportation via elevators, door access control, and station docking without human intervention, significantly reducing manual labor in repetitive transport processes while enhancing system response speed and safety through precise motion control. By leveraging digital twin platforms and real-time monitoring systems, they provide comprehensive traceability of material flow and optimize resource allocation, serving as a critical infrastructure for intelligent logistics and service automation. In 2025, global Split-design Delivery Robots production reached approximately 47.7 k units with an average global market price of around k US\$15 per unit.
