Abstracts

The global Split Electric Vehicle Charging Pile market size is expected to reach \$ 2248.6 million by 2029, rising at a market growth of 11.5% CAGR during the forecast period (2023-2029).

A split type DC charging pile is a direct current (DC) charging system that is divided into separate components for installation. It consists of a power module and a charging interface module. The power module converts alternating current (AC) into stable DC power and is installed in a centralized location, while the charging interface module is installed at the charging location. This design allows for centralized management of the power module and flexible installation of the charging interface module. Split-type DC charging piles provide fast and reliable DC charging services, facilitating quick charging and extended driving range for electric vehicles.
