A split-phase inverter is a type of power inverter specifically designed to work with split-phase electrical systems, common in residential applications in North America. Split-phase systems have two 120V legs that are 180 degrees out of phase, allowing for both 120V and 240V outputs. The primary role of a split-phase inverter is to convert DC (direct current) power, typically from batteries or solar panels, into AC (alternating current) power that matches the split-phase configuration. This makes it possible to power standard household appliances, which may require either 120V or 240V, depending on the device.
