The global Split Septum Needleless Infusion Connectors market size is expected to reach \$ 910.7 million by 2030, rising at a market growth of 5.8% CAGR during the forecast period (2024-2030).

Split septum needleless infusion connectors are innovative medical devices used for fluid infusion in intravenous therapy, offering enhanced safety and convenience. The market demand for these products is gradually increasing, being favored by medical institutions and healthcare professionals. These connectors are primarily used in intravenous therapy procedures, eliminating the need for needles and allowing fluid infusion through a split septum, thereby reducing the risk of needle-related infections and healthcare worker needlestick injuries. In the future, with continuous advancements in medical technology and increasing emphasis on medical safety, split septum needleless infusion connectors are expected to gain broader application and adoption in the medical industry.

The Split Septum Needleless Infusion Connectors are innovative medical devices used in healthcare settings for intravenous therapy. They feature a split septum design that allows for needleless access to intravenous lines, facilitating the administration of fluids and medications without the need for puncturing the septum with a needle. This design reduces the risk of needlestick injuries for healthcare workers and minimizes the potential for contamination, enhancing patient safety and improving overall efficiency in clinical settings.
