A split air source heat pump is a device that uses air as a heat source or heat sink to provide functions such as heating, cooling or hot water. Its working principle is based on heat pump technology, which achieves heating or cooling through heat exchange in the air and has a high energy efficiency ratio. Split means that the device consists of two or more parts, usually including an outdoor unit (heat exchanger, compressor, etc.) and an indoor unit (evaporator, fan, etc.), which are connected by pipes.
