The global Sponge Clothes, Cellulose Casing and Fibrous Casing market size is expected to reach \$ 2115 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Sponge cloth is a porous and absorbent material made from natural or synthetic fibers, known for its excellent water absorption and softness, and is widely used in cleaning, healthcare, and industrial filtration applications. Cellulose casings are edible casings made primarily from natural cellulose through chemical and physical processing, commonly used for packaging sausages and other meat products to maintain shape and texture. Fiber casings are casings made from fibrous materials (such as cellulose, collagen, or synthetic polymers), which may be edible or non-edible, offering high strength and heat resistance, and are extensively used in meat processing and pharmaceutical packaging. With the increasing emphasis on food safety and environmental sustainability, the market prospects for cellulose and fiber casings are very promising. Natural, biodegradable, and non-polluting materials are gaining popularity, driving companies to invest in research and development to improve the strength, flexibility, and edibility of casings. Meanwhile, sponge cloths are seeing rapid expansion in medical, cleaning, and environmental industries. Especially under the trends of sustainable development and smart manufacturing, the demand for functional and multi-purpose sponge cloths is expected to grow significantly.
