## Abstracts

The global Spoon Straw Making Machine market size is expected to reach \$ 430 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

To address the issue of traditional straws' inability to effectively scoop solid ingredients (such as fruit pieces, tapioca pearls, and pudding) from beverages, the spoon straw making machine was developed. This machine integrates the functions of a straw and a spoon, enhancing user experience and ease of consumption. The demand for spoon-shaped straw manufacturing machines stems directly from the downstream beverage and food industries' (such as dairy products, tea chains, and packaged desserts) market demand for multifunctional eating tools. These machines aim to replace the traditional 'straw + spoon' combination, simplifying packaging and enhancing consumer convenience. The upstream supply chain handles the supply of raw materials for straws (PLA particles, food-grade paper, and plastic resin) and specialized molding molds. The downstream chain connects the packaging, sterilization, and distribution of spoon-shaped straws, ultimately applying them to retail beverages, medical liquid foods, and airline catering. In 2025, the production volume of spoon straw making machine is estimated at approximately 15,000 units, with an average price of approximately US\$20,000 per unit, a gross profit margin of approximately 40%, and a single-line capacity of 200 units per year.
