According to our (Global Info Research) latest study, the global Spot Welding Robots market size was valued at USD 3254.6 million in 2023 and is forecast to a readjusted size of USD 4456.9 million by 2030 with a CAGR of 4.6% during review period.

Robotic spot welding, a type of resistance welding, is the most common welding application found in the manufacturing field. Spot welding robots are used to carry the spot welding operation in end-user industries. These robots deploy copper alloys for transmitting electric current to the welding point and contain a spot welding gun at the terminal point of the robot wrist, which is in place instead of an end-effector.

The increased operational efficiency of spot welding robots is one of the major factors that have a positive impact on the global spot welding robots market during the forecast period. Compared to the CNC machines and manual handling of operations, the spot welding robots offer higher operational efficiency. Advantages such as increase in repeatability and reliability, better personnel safety, and efficient utilization of space will drive the demand for spot welding robots. Additionally, spot welding robots also provide flexibility to weld complex workpieces and maintains consistency in welding that reduces the material loss and improves the product quality.
