Abstracts

According to our (Global Info Research) latest study, the global SPR Sensor Chips and Supporting Consumables market size was valued at US$ 490 million in 2025 and is forecast to a readjusted size of US$ 9794 million by 2032 with a CAGR of 62.5% during review period.

SPR Consumables refer to specialized consumables used in Surface Plasmon Resonance (SPR) analysis systems. These mainly include functionalized sensor chips/cartridges, maintenance chips, reagent kits, sample vials, microplate adapters, and membrane components specific to the platform. The estimated overall gross margin is approximately 64%.

SPR consumables are typical high-margin, repeat-purchase items driven by installed systems. Growth is fueled not only by new instrument installations but also by routine experimental consumption. SPR systems enable real-time, label-free molecular interaction analysis and are used across biotherapeutics, small-molecule drug discovery, vaccine development, and QC applications. Labs may consume tens to hundreds of chips per year, creating continuous repurchase demand.

Market structure shows that standard CM/carboxymethyl dextran chips remain the highest-volume base category, while high-value growth is driven by pre-functionalized chips, capture chips, high-throughput array chips, and platform-specific cartridges. Price differences are driven by surface chemistry, platform compatibility, and experimental reliability rather than the cost of the substrate alone.

Increasing demand for biopharmaceutical, antibody, ADC, bispecific, extracellular

vesicle, and viral particle characterization, along with CRO outsourcing and high-throughput screening, improves per-device utilization and enhances consumable repurchase, supporting strong market growth.
