According to our (Global Info Research) latest study, the global Sprag Clutches market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A sprag clutch consists of an inner and outer ring. Unlike other types of clutches, however, sprag clutches are perfectly smooth inside. There are no rims or ridges in this specific clutch. The inner and outer rings are connected by small parts like steel wedges, which are referred to as sprags or sprag elements. Sprag elements are permanently in contact with both the inner and outer ring of a sprag clutch. They are placed at a specific angle that helps to create torque.
