According to our (Global Info Research) latest study, the global Spray Aluminizing Services market size was valued at US\$ 255 million in 2025 and is forecast to a readjusted size of US\$ 376 million by 2032 with a CAGR of 5.7% during review period.

Spray Aluminizing Services refer to surface engineering services that use processes such as thermal spray aluminum (TSA), arc spray aluminum, or flame spray aluminum to deposit aluminum layers onto the surface of steel or other substrates, thereby improving their corrosion resistance, oxidation resistance, weather resistance, and service life. This service typically includes surface pretreatment, aluminum spraying application, sealing/grouting, thickness and adhesion testing, and on-site or workshop application, and is widely used in marine engineering, bridges, petrochemicals, power generation, and high-temperature industrial equipment.

Because thermal spray aluminum coatings are suitable for corrosion protection in environments ranging from -50°C to +200°C and offer strong durability in marine, humid, salt spray, and industrial atmospheric environments, an increasing number of bridge, offshore wind power, oil and gas facilities, chimneys, storage tanks, and steel structure projects are adopting aluminum spraying to replace some traditional coating systems or in combination with sealants.

Another significant trend is the growth in demand driven by infrastructure life extension and energy project upgrades. Leading thermal spraying companies and material suppliers have consistently emphasized the demand for thermal spraying in highly corrosive environments such as aviation, energy, and industry in recent years. Aluminum spraying services, as a mature corrosion protection and high-temperature

surface treatment solution, are benefiting from the expansion of the market for offshore platforms, wind turbine towers, power generation equipment, flue gas systems, and the renovation of old steel structures. At the same time, the industry is increasingly emphasizing construction quality, surface cleanliness, sealing solutions, and life-cycle cost control in accordance with ISO 2063.
